BACTÉRIOSOL® BOOSTER

MARCEL MÉZY TECHNOLOGIES®

Booster 50

Product usable in Organic Farming in accordance with CE n° 834/2007 et n°889/2008.
Product complies with NOP (US National Organic Program).

Organic amendment complies with NF U44-051 norm
(Amendement organique)

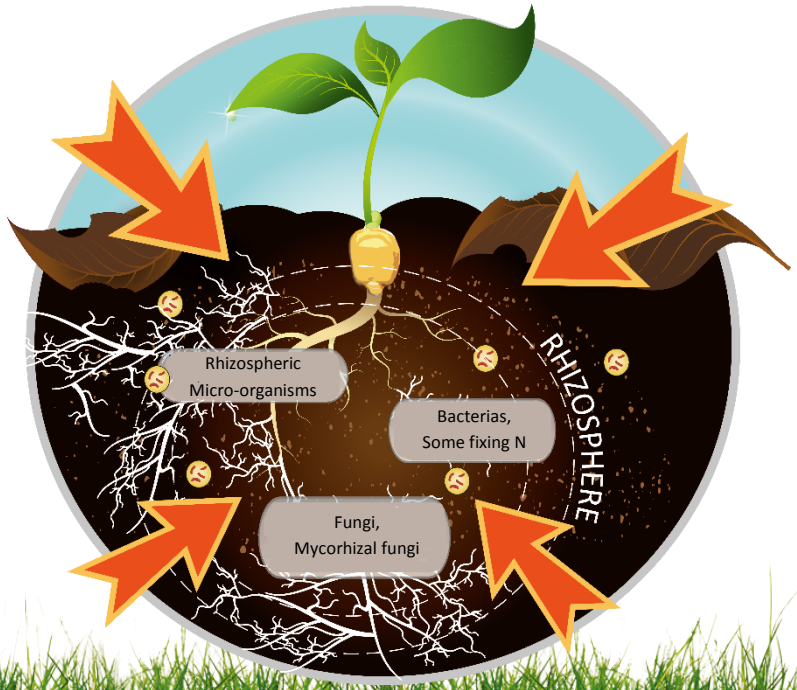
The localised complementary range of Sobac products

BACTÉRIOSOL Booster 50, organic amendment NF U44-051, improves physical, chemical or biological properties of the rhizospherical soil, thereby optimising:

- **Exchanges between soil and plants,**
- **Root development,**
- **Micro-organisms, in particular mycorrhizal fungi**
- **Rhizospherical humus of the soil, close to the seed**

Consequently, a better homogeneity of the crop is observed, especially in terms of maturity, which gives an optimum quality of the crop harvested.

BACTÉRIOSOL BOOSTER ACTION



SOBAC
for the soil, for a long time.

Marcel Mézy Technologies are produced by MÉZAGRI and marketed by

SOBAC, partner of 4 per 1000 initiative.

MODE OF ACTION

The application of Bactériosol® Booster 50 is done **close to the seed** to improve the symbiotic exchanges between the plant and the micro-organisms.

These spontaneous microorganisms, true allies, selected on Marcel Mézy's composts, especially fungi and bacteria, improve the physical, chemical or biological properties of the rhizospheric soil.

Soil nutrients are more available because the volume of soil explore by the roots and mycorrhiza has increased greatly.

Thus, the plant can better express its potential in terms of both yield and quality, is more resistant to external aggressions and is able to really benefit from the water of the soil while being less dependent on inputs.

The action of Bactériosol® Booster 50 is localised to the rhizosphere whereas Bactériolit® or Bactériosol®, applied on the surface have an action on the whole soil

USE

• BACTÉRIOSOL Booster 50 is locally applied when seeding, at a rate of 50 kg/ha in the fetilisers of the seeders

• BACTÉRIOSOL Booster 50 is a **mini-pellets**.

• **BACTÉRIOSOL Booster 50 only used along with BACTÉRIOLIT or BACTÉRIOSOL.**

• It allows you to save on **starter fertiliser**

• It allows you to **reduce nitrogen application by 30 to 50 units more than the usual nitrogen reduction already allowed by Bactériosol® Concentré / Bactériolit® Concentré on its own.**

Spreader settings are available on the website: www.sobac.fr

COMPOSITION

Mix of plant matter, mineral matter and a selection of natural composted plants on which grow a spontaneous micro-organism complex from Marcel Mézy's composts.
